PROJECTS

AppointOne

Developed secure Laravel REST APIs integrated with a React frontend. Implemented complete recruiter-candidate hiring workflows and application tracking systems. Built role-based authentication and dynamic dashboards. Improved API performance and handled production deployment using cPanel. Designed structured workflows for hiring pipelines and recruitment management.

GodsOwnChild

Built and maintained an autism-focused e-commerce and content platform using Laravel (MVC architecture) and Blade. Developed full e-commerce functionality including product management, cart, checkout, and order processing. Implemented admin role management and content modules. Optimized MySQL database structure and complex queries for better performance. Managed production deployment and server configuration using cPanel.

Hirexpress

React + Laravel | Internal HR Management System. Developed a comprehensive internal HR recruitment system using Laravel backend and React frontend. Built modules for candidate tracking, interview scheduling, and hiring status workflows.

Finstallix

Social Share allows users to connect multiple social media platforms via APIs (OAuth) and manage them from a single dashboard. Users can create, schedule, and publish posts (including media) across selected platforms simultaneously. It supports team collaboration, workspace management, and plan-based limits for efficient social media automation.
